Power BI Services

Understand how to effectively and efficiently leverage Power BI to transform your data to actionable insights

Microsoft Power BI is a business analytics service that delivers insights to enable fast, informed decisions. It can analyze and correlate data from a variety of sources including on-premises and in the cloud and transform that data into stunning visuals that can deliver critical insights into virtually any area of an organization.

But learning how to leverage the "power" of Power BI can be challenging especially if various data sources need to be combined to deliver real insights. Power BI Data Analysis Expressions (DAX) is a very powerful way of creating new information from data already in your model however DAX is complicated. And once you get the information you need how do you present it in a way that makes sense for your audience?

Silect provides advanced Power BI services to deliver customized dashboards, training and more.

Dashboard Development

A typical engagement begins with a thorough assessment of your requirements with all stakeholders. Next data sources are studied and a data model is defined. Visual prototypes are developed and shared and feedback is incorporated into the development plan. Finally development begins and iterative releases are reviewed and feedback incorporated.

Completion of the project includes review of all Power BI code and training on how to maintain and update the dashboards. Ongoing maintenance and support contracts are also available.

About Silect

Founded in 2003, Silect has helped thousands of organizations worldwide with their IT management challenges. Silect is a Microsoft GOLD partner, a member of the Microsoft Power BI Red Carpet program as well as a member of the Microsoft Azure Management Elite team.
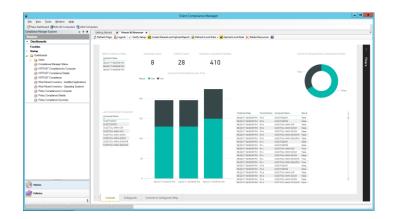

Sample Dashboards

- IT Management Alert Operator performance for a large multi-national corporation (Figure 1)
- Compliance assessment dashboards and details in a commercial product (Figure 2)
