

Silect Operations Portal

Implement DevOps-Driven Monitoring to Simplify Operations

DevOps is transforming the way organizations are developing, deploying and operating applications, systems and IT infrastructure accelerating time to market for new applications and systems leading to a more agile organization. A key component of DevOps is enabling application teams to take ownership of monitoring the health of their applications and systems leading to what we call DevOps-driven monitoring.

But there are many challenges to adopting DevOps-driven monitoring as it represents an organizational shift in the way IT is managed. And for System Center Operations Manager (SCOM) users adopting DevOps-driven monitoring is especially difficult because the tools make effective delegation of responsibilities impossible.

Introducing the Silect Operations Portal

The new Silect Operations Portal can help your organization move towards DevOps and DevOps-driven monitoring. The new portal empowers business groups to manage their own systems and applications while control is maintained for the overall monitoring infrastructure. Business groups get just enough access so they can fully manage their applications however guardrails are in place ensuring they can't bypass central policies.

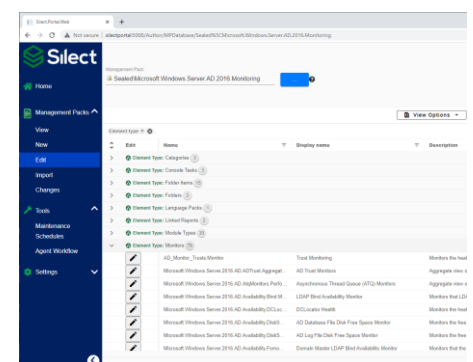

Feature Overview

- View and share monitoring configuration details with stakeholders
- Safely delegate the management of monitoring configurations
- Easily enable onboarding of new monitoring scenarios
- Programmatically adjust monitoring configurations
- All features are REST API accessible enabling integration and automation scenarios

About Silect

Founded in 2003, Silect has helped thousands of organizations worldwide with their IT management challenges. Silect is a Microsoft partner, a member of the Microsoft Power BI Red Carpet program and Microsoft Azure Management Elite team.

By giving you the ability to safely and effectively delegate IT functions to business groups and applications owners, the Silect Operations Portal enables your organizations to adopt DevOps-driven monitoring enabling a more agile organization.
